

LOVE, LIFE AND FREEDOM

Volume I: All Possible with Truth by Dr. Philip G. Ney

Foreword

I have known Dr. Philip Ney for more years than either of us would probably like to recall, and I know him to be first and foremost a Christian and following hard on the heels of his faith is the fact that he is a dyed-in-the-wool scientist. His first and possibly most important scientific dedication is of course to medicine, but the width and breadth of his scientific knowledge and learning has always amazed me. Furthermore Philip is a nexus scientist in that he brings together hitherto divergent facets of many differing sciences, ever apart and never to meet. Philip however brings these together and somehow welds them into a cohesive whole with Christianity which is actually the Original natural science.

Philip has worked tirelessly for his entire career to protect and assist the disadvantaged among us, whether it be those who have suffered abuse as children, the abuse of war, the horrific abuse of government-sponsored abortions which already seem to have almost depopulated large areas of Eastern European nations, or other emotional and psychiatric injuries, sicknesses and disorders. One thinks of men of his age who have achieved his level of eminence (against considerable ignorant and often official opposition) as being wealthy plutocrats, long-since retired and living lives of opulent ease, but Philip is none of those things. He still works steadily to try to improve the lives of hurting and damaged people around and across the world, and at the same time improve the standard of living in his own country. Such people are valuable and when they speak we should listen.

This book is the result of many years of study, many years of experience, many years of prayer and what is perhaps most rare in this fly-by minute world of hyper-technology, many years of deep and earnest thought. For millennia Men have revered (and sometimes feared) those who really think, and Philip is such a man. His cogitations have resulted in amazing psychotherapeutic programs and techniques which have helped damaged people all over the world. His technical expertise has been utilized to invent and design new rigs for ships along with other interesting and imaginative innovations, but of all his achievements this book may well be the brightest jewel he has cut and polished for generations to come. In this volume Philip presents, investigates and explains hypotheses that have daunted lesser researchers and writers over the centuries. Truly some of it is beyond me, but that is my deficiency and lack of learning.

Read this book – you will find wonderful gems in it, and you if cannot fully understand all of it merely bow your head and if you are young enough, turn back to your studies, and if you are old enough, simply give thanks that there are men like Philip Ney to face and investigate such matters as are beyond you and I.
